

Build Your Own ChatGPT for Your Documents

Search. Understand. Decide — instantly, locally, privately.

The Problem

You waste time digging through documents. Contracts, reports, manuals — the information is there, but extracting it is slow, manual, and inefficient. Cloud AI tools add cost, latency, and privacy risks.

The Solution

This system turns your documents into an intelligent interface. Ask a question and get a precise answer in seconds. No browsing. No guessing.

What You Get

- Instant answers from your documents
- Multi-collection search (contracts, reports, manuals)
- Clean interactive UI
- Optional AI answers (Ollama)
- Full privacy — runs locally
- Zero usage costs

Real Use Cases

Legal: 'What obligations does the user have?' → instant summary

Startup: 'What is hurting growth?' → actionable insight

Industrial: 'What causes pressure drop?' → direct diagnosis

Why This Is Different

Most solutions depend on APIs and cloud services. This one runs entirely on your machine. No subscriptions. No limits. Full control.

Who This Is For

Developers who want to build, customize, or resell AI systems. If you understand Python and want a real, working product — this is your starting point.

Start using your data the way it should be used — instantly and intelligently.
